

HIV Surveillance Report Arkansas, 2016

Arkansas Department of Health
Keeping Your Hometown Healthy

This issue of the HIV Surveillance Report is produced by the Arkansas Department of Health Infectious Disease Branch.

Data are presented for incidence and prevalence of HIV infection among residents of Arkansas based on data reported to the HIV Surveillance Program as of December 31, 2016.

DISCLAIMER:

Since January 2014 the Arkansas HIV Surveillance Program has been conducting data cleaning activities on Arkansas surveillance data to ensure the most accurate picture of the HIV epidemic in Arkansas. As a result of this process, you may notice a difference in the number of cases reported in previous issues of this document. Increased numbers of cases presented in this report partly reflect inclusion of incomplete case reports from prior years. A case is assigned to a specific year if the case is completed and reported in that year regardless of when the diagnosis is made. For best estimates of new diagnoses for any specific year, one should refer to the annual Integrated HIV Epidemiologic Profile which is published approximately one year after the HIV Annual Surveillance Summary report.

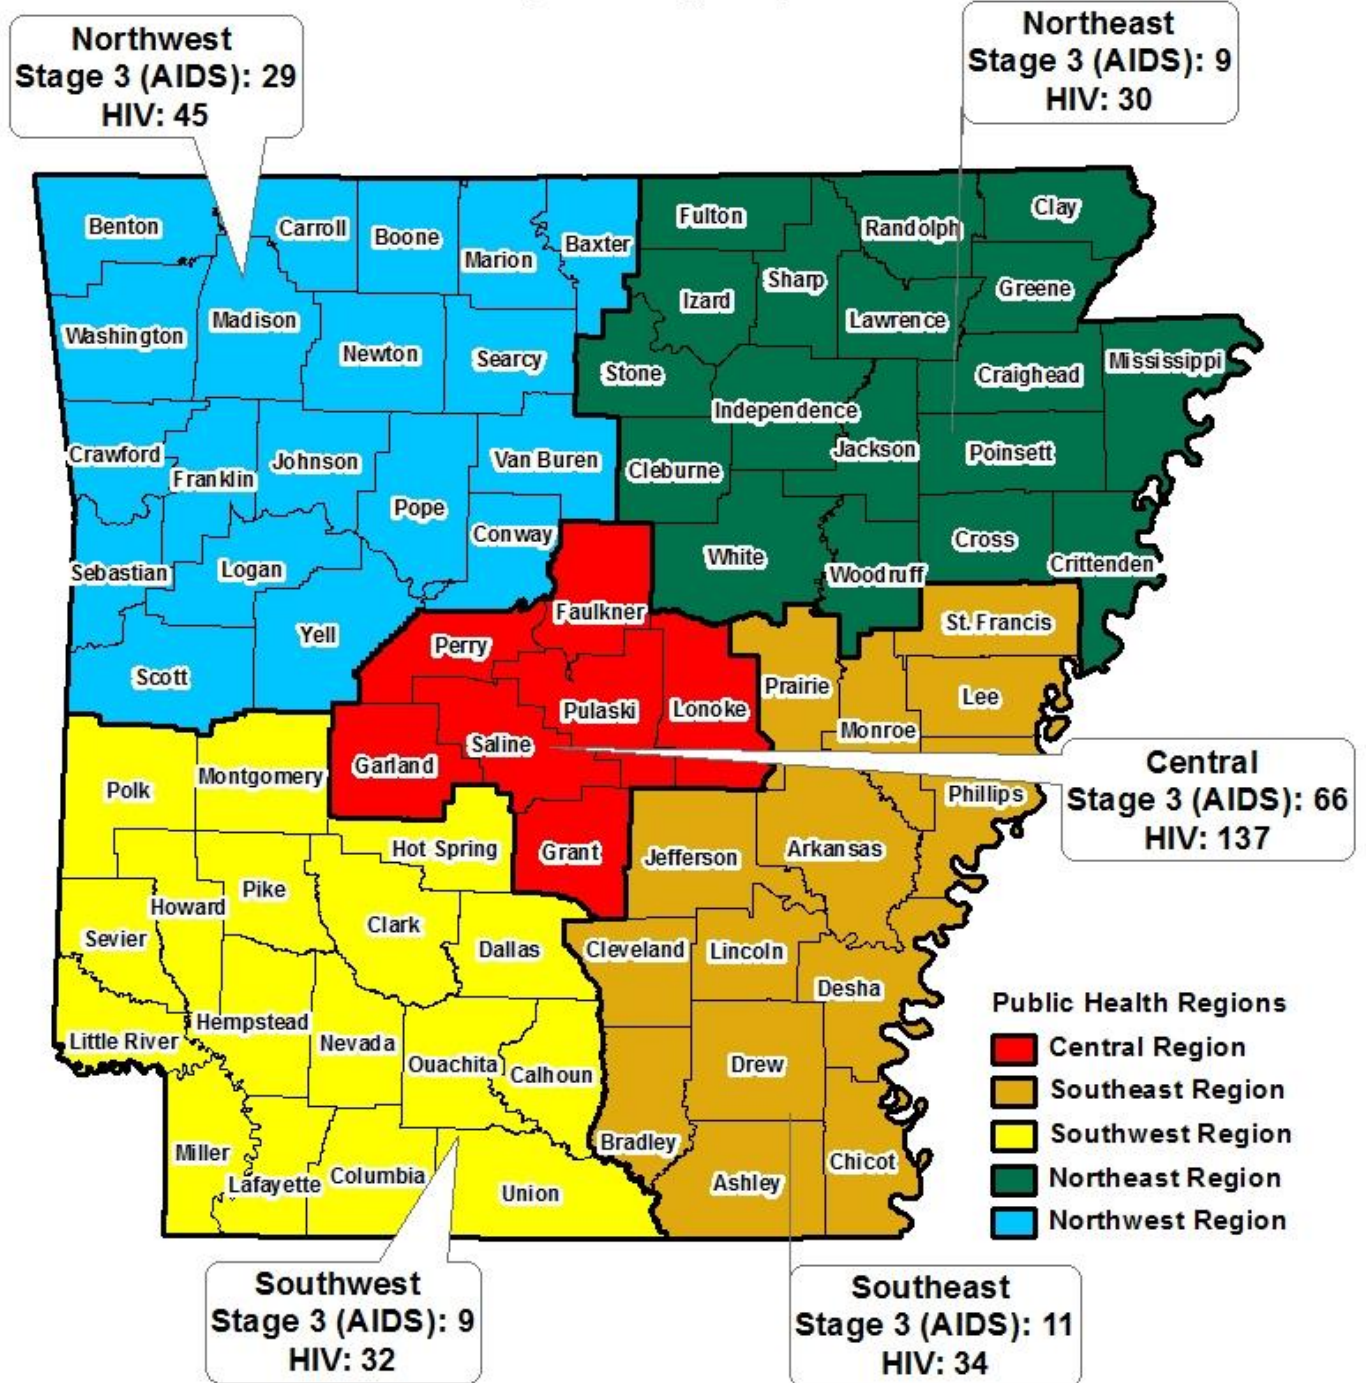

The Arkansas HIV Surveillance Report can be obtained from the World Wide Web at:
<http://www.healthy.arkansas.gov/programsServices/healthStatistics/Pages/stdHivRegistry.aspx>

Information on how to report HIV and STD cases may be obtained by contacting your local or regional health department or by calling (501) 661-2887.

HIV Disease Incidence by Public Health Regions Arkansas, 2016 by Report Date

Stage 3 (AIDS) Incidence is defined as the number of new AIDS cases reported during the period specified. This includes persons originally diagnosed as HIV-non-AIDS (HIV-NA), and progressed to AIDS sometime during the year. It also includes those reported as HIV-non-AIDS in a previous year that progressed to AIDS in the specified year. Please note that a case is counted only once during a year even if the diagnostic status progresses from HIV to AIDS. Once the status of a case progress to AIDS it remains, and is never reclassified as HIV. Only one AIDS and HIV-NA category applies to an individual within a single year.

HIV Incidence is defined as the number of new HIV- non-AIDS cases reported during the period specified.

HIV Disease Incidence is defined as the sum of new HIV-NA cases and new AIDS cases reported during the period specified. Within each year, each case is only shown once (can be either an HIV-NA case or an AIDS case).
